Muhammad Mudassar

Full Stack AI Developer

+92 3019509763 contacmudassar@gmail.com LinkedIn Github

SUMMARY

AI-focused Full Stack Developer who builds and deploys LLM-powered products end to end. Experience with RAG pipelines, validated structured LLM output, and accuracy evaluation, using Python, FastAPI, and Qdrant. Also builds the full application around them with React, Node.js, MongoDB, and JWT authentication. Built and deployed three projects on Vercel and Render:

SKILLS

HTML | CSS/Tailwind | JavaScript | React.js | Node.js | Express.js | MongoDB | Qdrant | Python | FastAPI | Langraph | Git and GitHub | vercel | rendor

PROJECTS

Local Biz Bot – AI Website Chatbot for Local Businesses

https://local-biz-bot-qxl6.onrender.com/

Python + FastAPI + Qdrant (RAG) + Groq LLM + JavaScript

- Built a 24/7 AI chatbot that local businesses add with 1 line of code. It answers customer questions about prices, hours and services, so owners lose fewer leads after hours.
- Built a RAG pipeline that learns a business's website automatically, setting up a new client in minutes with no manual data entry. It hands off to a call-back form instead of guessing.
- IShipped an owner dashboard to add sites, test the bot and view captured leads, with lead capture built into the chat widget and deployed on Render.

Morning Briefing Agent – AI Daily Briefing SaaS on Telegram

https://morning-brief-frontend.vercel.app/

React + Node.js/Express + MongoDB + Google Gemini + Telegram Bot API

- Built a SaaS that sends each user a personalised AI briefing with weather and top news on Telegram at their chosen time. It gives people one 30-second read instead of checking several apps every morning.
- Built a time-zone-aware scheduler that delivers briefings on time worldwide and catches up after a server restart, with a fallback briefing if the AI call fails, so users never miss a day.
- Implemented Telegram Bot for delivery and account linking, OpenWeatherMap and NewsData.io API integrations, and a React/Vite dashboard for managing preferences and viewing briefing history

Receipt Extractor – AI Receipt to Expense Sheet Tool

https://receipt-extractor-psi.vercel.app/

Python + FastAPI + Groq LLM + Pydantic + Tailwind CSS

- Built an AI tool that turns up to 20 receipt PDFs or photos into a clean Excel/CSV expense sheet with date, vendor, amount, tax, currency and category. It replaces manual data entry with a single upload.
- Designed an extraction pipeline with Pydantic validation and automatic retry. Missing or doubtful fields are flagged for review instead of guessed, so the numbers in the sheet can be trusted.
- Measured field accuracy on a labelled receipt set with an evaluation script, backed by 18 automated tests with a mocked LLM.

EXPERIENCE

Wordpress Developer

MawkTech Space Sargodha

Oct 2025 - Apr 2026 Sargodha

- Work as a WordPress Designer at MawkTech Space Sargodha (6 Months)

EDUCATION

Bachelor of Science in Information Technology (BS-IT)

Superior University Sargodha

2022 - 2026

CGPA
3.45 / 4.00
